Information is subject to change without notice. This guide is not intended to provide specific technical data or recommendations for the reader's specific application or use of silicone hose or related items in terms of selection, assembly, installation or any physical use of silicone hose and related hardware or any related items. The user, through its own analysis and testing, is solely responsible for making the final selection of hose and related products and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met.*

SAFETY WARNING

Failure to consider how temperature and other conditions affect hose performance could result in death personal injury or property damage. As temperature increases or decreases, burst pressure, safe working pressure, coupling retention properties, and other safety characteristic of the hose can significantly decrease. Deterioration due to wear, impulse, and other environmental conditions should also be considered. The user, through its own analysis and testing, is solely responsible for making the final selection of the hose and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met.
